

EMAIL PROTECTION

Office 365 | Exchange | G-Suite

SKOUT Email Protection is a cloud-based email security solution that blocks spam, malware, and – most importantly – phishing attacks. Our solution catches everything by utilizing computer vision, artificial intelligence and machine learning. Driven, curious, mobile, and growing smarter by the subject line, SKOUT Email Protection adds an important layer of protection to your inbox.

PROTECT AND TRAIN

Warning banners appear directly in the email, alerting the recipient to suspicious emails.

DEPLOY EFFORTLESSLY

Integrates into Office 365 organization-wide within minutes. Exchange and G-Suite compatible.

USER-FRIENDLY WARNINGS

Safe/Unusual/Malicious warnings let recipient know the threat level of the email.

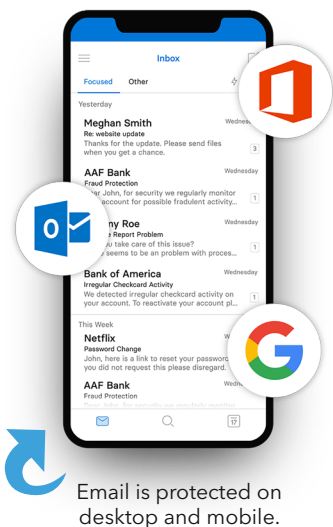

EXPERT ANALYSIS

Alerts and threat feeds are sent to the SKOUTs in our Security Operation Center who are available 24/7x365.

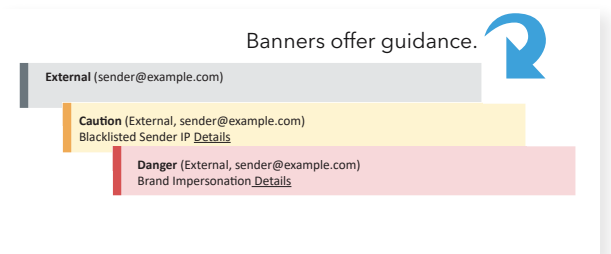

This is the Next Generation of Email Protection

The challenge of phishing is daunting; we want the solution to be simple. From the classifier model that powers SKOUT CYBERSECURITY's machine learning to the elegantly intuitive design of the banner, everything we do is designed to orient and empower our users.

Email is protected on desktop and mobile.

- All incoming mail is automatically checked against over two dozen computer vision and text analysis models that “see” the message much like a person would – so even very convincing forgeries are blocked.
- Protects against both spear phishing and brand forgery attacks.
- Deploys organization-wide in 1–2 hours.
- Works with any mail client, on any device.
- “Report Phish” link in the mail sends the mail to our security experts.
- HTML sanitization blocks XSS, JavaScript, CSS attacks
- Real-time analysis engine does not slow down mail delivery.

SKOUT Email Protection is a new solution in the war against phishing. It is one of the smartest investments you can make for your organization.
